

Hi,

Hitesh here, to give you guided steps for installing mongo DB in Catalina.

1.

```
brew tap mongodb/brew  
brew install mongodb-community
```

2.

```
sudo mkdir -p /System/Volumes/Data/data/db
```

```
whoami
```

```
sudo chown -R lco /System/Volumes/Data/data/db
```

NOTE: replace lco with your username

Use this command to run mongod:

```
mongod --dbpath /System/Volumes/Data/data/db
```

To keep it up and running as service:

```
brew services start mongodb-community
```

+++++

alias in zshell:

```
cd
sudo vim .zshrc
```

Press I to get into insert mode

```
alias mongod="sudo mongod --dbpath /System/
Volumes/Data/data/db"
```

Press escape once, then type :wq

Things should be all good now and you can just run
mongo from shell and mongoldd should be serving
you.

Awesome!

+++++
